Multidisciplinary Approach to Implant Prosthodontics

A comprehensive prosthetic education program for the successful and predictable restoration of dental implants.

Successful implant therapy involves a delicate balance between soft tissue, hard tissue, and an aesthetic and functional prosthetic component. This course will look at each of the following aspects for the provision of dental implants for your patients from the unique perspectives of periodontology, oral surgery and prosthodontics. This course includes both didactic lecture and hands on simulation as well as formal evaluations. The course hours include 35 hours of prosthetic instruction and 14 hours of surgical instruction.

Learning Objectives:
By the end of this course, attendees will be familiar with:

- Case Selection
- Biological Basis Of Osseointegration
- Pretreatment Protocols
- Surgical Treatment
- Post-Surgical Pre-Prosthetic Assessment
- Prosthetic Treatment
- Long-Term Follow-Up And Maintenance
- Management Of Complications
- Record Keeping
- Effective Dental Team Communication
- Effective Patient Communication

Target Audience:  This course is intended for dentists.

Dr. Bruce Glazer and Dr. Lionel Lenkinski will present “Adverse Outcomes”, Category 1 - Core Course Credits (3)

“One of the best courses I have ever taken in my 20 years of practicing. The chemistry between all the presenters is a delight to see. Just to see them brainstorming certain scenarios on the spot was a great learning experience. Thank You!”

Dr. Dan I. Haas
